Abstract

We need to take a positive view of the fact that the virus called covid-19 is ruling over the entire human race and has taught us a lot. Every human being is proud of health and wealth, but coin has two sides, positive and negative. If we think on positive side, this virus taught us that how to take care of our family and how to manage our needs of daily life using minimum resources. We started believing in our Ayurvedic Treatment which increases our immunity naturally. We learnt how to be self-reliant and we started keeping faith on Lord. Also, we started believing in our Indian culture and our traditions.

The whole world came to standstill and reason is covid-19 pandemic. It has happened such that all of sudden were a part of horror movie. It was about an ending of year 2019, a virus made its home in the body of more than thousands of people in the City of Wuhan China, where it got its name covid-19. And within a couple of days it got spread all over the world and more than millions of people got affected by this virus. Many of them lost their lives by this dangerous virus because of which countries banned gathering of people and enforced a strict lockdown to get a control on this dangerous and highly communicable diseases.

A year ago, most of us wouldn't have understood meaning of words such as social distancing, sanitizer, face mask, continuous hand wash, quarantine, isolation etc. Humans are social creatures and we need social interaction and human contact.

The covid-19 pandemic has highlighted the importance of social interaction and human contact with and almost every aspect of our lives including education, employment, entertainment and recreation.

As a second largest populated country, India is also known for its diverse culture. The main features of Indian culture are unity in diversity and tolerance. India has a rich cultural heritage where people literally live for their culture.

It is respected and honoured everywhere in India. The cultural activities include way of behaviour with others, customs to follow, festivals, music and dance. All these things needs social interaction which was banned during this pandemic period and hence was very different experience to everyone.

PM of India declared "Janta Curfew" on 22nd of March 2020 and within 2 days after that, India was under lockdown as the situation was worsening day by day. The decision was made because India has lot many number of folks and if the lockdown was not announced, then it could have been a major outbreak in the world.

But thanks to the decision committee of Government of India that they took immediate action against it. This was a massive success as the outbreak was in control during this period. Emergency services included all medical facilities, grocery stores and vegetable providers, these were the 3 pillars of support for every Indian during this worse condition.

Conclusion

In conclusion, corona virus was a major outbreak for whole world but also it brought a package of whole new teachings for we human beings. It totally destroyed someone's lives and for someone it taught new lessons.

Vital positive impact was on the people who left their homes for work purposes, because these people were having no option rather returning to their hometown. This virus joined many families, taught us that money is not always important but the people too are, tested intellectual skills of doctors and scientists to their peak and ignited a spark of unity amongst us.
