**(A) How to predict a person's Date of Birth**

With this technique you can predict the date of birth of any number of people simultaneously. You can try this with your family members, friends, relatives, colleagues and even a partner.

**STEPS**

- (1) Ask the people to take the number of the month in which they were born (January is 1, February is 2 and so on...)
- (2) Now, ask them to double the number
- (3) Add 5 to it
- (4) Multiply it by 5
- (5) Put a zero behind the answer
- (6) Add their date of birth (2) that we have on (3) to the answer that add (2)

After the steps are over, ask them to tell you the final answer. And let just by listening to their final answer you can predict their date of birth!

**SECRET**

From the answer that you get from each member of the audience,

- Mentally subtract 22 from the last two digits and you will have the date
- Subtract 2 from the remaining digits and you will have the month.

This, you will really get the date of birth.

**Example:**

Let us suppose I was a member of the audience. My date of birth is 26th June. Then I would have written the steps as follows:

1st Step: No. of month	= 6
2nd Step: No. of month	= 12
3rd Step: Add 5 to it	= 17
4th Step: Multiply it by 5	= 85
5th Step: Put a zero behind the answer	= 085
6th Step: Add their date of birth	= 085 + 26 = 111

This my final answer is 111. Now, let us see how we can deduct my date of birth from the final answer. We will subtract 22 from the last two digits to get the date. Next, we will subtract 2 from the remaining digits to get the month.

111	- 22	= 89
89	- 2	= 87

On similar lines if the final answer was 762, 1483 and 9173 the birthdays would be 26th May, 21st December and 21st August respectively.

762	- 22	= 740
740	- 2	= 738
1483	- 22	= 1461
1461	- 2	= 1459
9173	- 22	= 9151
9151	- 2	= 9149

With the knowledge of this technique, you can predict the birthday of hundreds of people simultaneously.

(Note: There are many such mathematical ways by which you can predict a person's date of birth. The method given above is one of the simplest methods.)

After the steps are over, ask them to tell you the final answer. And let just by listening to their final answer you can predict their date of birth!

**SECRET**

From the answer that you get from each member of the audience,

- Mentally subtract 22 from the last two digits and you will have the date
- Subtract 2 from the remaining digits and you will have the month.

This, you will really get the date of birth.

**Example:**

Let us suppose I was a member of the audience. My date of birth is 26th June. Then I would have written the steps as follows:

1st Step: No. of month	= 6
2nd Step: No. of month	= 12
3rd Step: Add 5 to it	= 17
4th Step: Multiply it by 5	= 85
5th Step: Put a zero behind the answer	= 085
6th Step: Add their date of birth	= 085 + 26 = 111

This my final answer is 111. Now, let us see how we can deduct my date of birth from the final answer. We will subtract 22 from the last two digits to get the date. Next, we will subtract 2 from the remaining digits to get the month.

111	- 22	= 89
89	- 2	= 87

On similar lines if the final answer was 762, 1483 and 9173 the birthdays would be 26th May, 21st December and 21st August respectively.

762	- 22	= 740
740	- 2	= 738
1483	- 22	= 1461
1461	- 2	= 1459
9173	- 22	= 9151
9151	- 2	= 9149

With the knowledge of this technique, you can predict the birthday of hundreds of people simultaneously.

(Note: There are many such mathematical ways by which you can predict a person's date of birth. The method given above is one of the simplest methods.)

**(B) How to predict a person's pocket money**

This technique will help you to find how much money a person has in his pocket/wallet etc. It can be tried on a group of people simultaneously.

**STEPS**

- Ask him to take the amount he has in his pocket (just the rupees, ignore the paise)
- Next, ask him to add 5 to it.
- Multiply the answer by 5
- Double the answer so obtained
- Finally, ask him to add his favourite one digit number (from 0-9)

After the steps are over ask them to tell you the final answer. And just by listening to the final answer you will come to know the amount he has in his pocket!

**SECRET**

- Ignore the digit in the unit's place.
- From the remaining number, subtract 5 and you will come to know the amount he has in his pocket.

Example  
Let us suppose a person has 23 Rupees in his pocket. He will work out the steps as given below:  
 $23 + 5 = 28$   
 $28 \times 5 = 140$   
 $140 \times 2 = 280$   
 $280 + 8 = 288$   
 Thus, after these steps completed he will tell you the answer as 288. Now, if we take away the unit's place from the final answer, we are left with 28. From 28, we subtract 5 and get the amount in his pocket. And the answer is confirmed.

Similarly, if the man has 100, 15 and 100 the answer would be 1000, 6 and 10 Rupees respectively.

From 1000, we ignore the last digit 0 and take only 100. From 100, we subtract 5 and get the answer as 95 and so on.

It can be this technique in any situation, as long as you can predict the amount a person has in his pocket by 1 person this will be a great technique. A better solution may emerge with some of the students.

### (C) How to find the answer without knowing the question!

Using this technique you can find the total of a set of five numbers without knowing the numbers.

In my seminars, I ask a member of the audience to give me a three-digit number. Let us suppose someone he gives me the number as 801. Then, I write the number 801 and after leaving four lines I write the final answer as 2799.

801 (Audience)

Ans: 2799

Thus, I have got the final answer without knowing all the numbers. Next, I ask him to give me another three digit number. Let us suppose he gives me 354. Now, it's my turn. Within one second, I write the next number as 645.

801 (Audience)  
354 (Audience)  
645 (Speaker)

Ans: 2799

Now, again it's the turn of the audience. Let us suppose he gives me 800. Now, again it is my turn. Before he blinks his eye, I write my number as 199.

(g) Next, from 6 we move to the south-east and write the number 7. From 7, we move to the south-east and fill the number 8.

(h) From 8, we move to the south east and create an imaginary square. We fill the number 9 in the square farthest from this imaginary square in the same direction. (Refer to the figure given below.)

(i) From 9, we go to the south-east direction and make an imaginary square and fill the number 10 in the square farthest from this imaginary square in the same direction.

11	10	4

2			14	8
9	3			15

(k) From 10, we move towards the south-east and find that the square is already occupied by the number 6. Hence, we move to the west of 10 and fill it with the number 11.

From 22, we create an imaginary square and fill 23 in the square farthest from it in the same direction. From 23, we come to the south-east and fill 24.
